---

In addition to the subprocessors explicitly listed in your data processing agreement, we list below other subprocessors that are used as subprocessors in standard services of Arvato Systems. Please note that the following lists include all subprocessors of all standard services. However, this does not mean that your data will generally be shared with all subprocessors. The tables show which activity the subprocessor performs in which standard service.

If you would like to receive further information about the subprocessors, e.g. which subprocessors are used for your order, please contact your contract contact.

### 4 External subprocessors providing 3<sup>rd</sup> level support for standard services

For the processing of support requests from 3<sup>rd</sup> level support (e.g. to maintain proper IT operations, operating system support, hardware support), Arvato Systems' specialists are assigned, but in individual cases, external service providers or the manufacturers are also called upon via the manufacturer's own 3<sup>rd</sup>-level support.

As a rule, this is done for the purpose of troubleshooting in core and basic components in order to ensure the core functionalities of the infrastructure and only if Arvato Systems' specialists are unable to carry out the troubleshooting independently.

A commissioning of service providers / manufacturers for the purpose of processing the data available in client's systems as the essence of the order does not take place. For technical reasons, a possibility of taking note of personal data in the context of the implementation the 3<sup>rd</sup> level support can not be safely excluded in all cases – however, the inspection of such data is in no case the subject or essence of the contractually agreed order.
